Report Overview

FRP (fiberglass-reinforced plastic) pipe is generally made up of resin such as polyester, vinyl ester, epoxy reinforced with glass fiber. Over the eons, FRP pipes have emerged as one of the most favored alternatives to conventional pipes, such as steel, concrete, and plastics, in water/wastewater applications, owing to their greater durability and excellent corrosion resistance. Being up to 75% lighter than steel pipe, FRP pipe allows faster installation and demand lower installation as well as maintenance cost. FRP pipes effectively maintain the temperature because of their low thermal insulating property. Other than water/wastewater, FRP pipes are also widely used in chemical & industrial, oil & gas, and marine & offshore applications.
