## Abstracts

Enzymes are basically the workhorses that bring all the essential ingredients together and alter them into substances that the body can utilize. Digestive enzymes ensure that the digestive process is done right from mouth to anus, however, the irregular eating time-table and huge fast food intake is creating several indigestion challenges today. Medical professionals have been suggesting the consumption of foods rich in fruit and vegetable-derived enzymes as a natural remedy, which is drawing the demand for fruit and vegetable-derived enzymes. The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.

The global Fruit and Vegetable-derived Enzymes market size was estimated at USD 647.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
