Abstracts

A fuel cell drive system refers to an integrated propulsion technology that utilizes hydrogen fuel cells to generate electricity through an electrochemical reaction between hydrogen and oxygen, producing water as the only emission; this electrical energy powers one or more electric motors to drive a vehicle or machinery, typically incorporating supporting subsystems such as hydrogen storage tanks, power control units, thermal management, and energy storage devices like batteries or supercapacitors for handling transient power demands and energy recuperation. This technology is characterized by its high efficiency, zero tailpipe emissions, rapid refueling capability, and suitability for heavy-duty and long-range applications where battery-electric alternatives may face limitations in energy density or operational endurance.

The global Fuel Cell Drive System market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
