### Report Overview

This report focus on Fuel Cell Generators market.

A fuel cell is an electrochemical cell that converts the chemical energy of a fuel (often hydrogen) and an oxidizing agent (often oxygen) into electricity through a pair of redox reactions. Fuel cells are different from most batteries in requiring a continuous source of fuel and oxygen (usually from air) to sustain the chemical reaction, whereas in a battery the chemical energy usually comes from metals and their ions or oxides that are commonly already present in the battery, except in flow batteries. Fuel cells can produce electricity continuously for as long as fuel and oxygen are supplied.

Fuel cell systems are considered a pioneering and environmentally friendly technology for a variety of applications for power supply. Following demands in varying industries such as utilities, factories and command and control centers across the globe, fuel cell generators now are driven to a new growth stage.
