Abstracts

A fuel cell humidifier is a device used in fuel cell systems to control the humidity of the gases, particularly the air (oxygen) and sometimes the hydrogen, entering the fuel cell stack. Proper humidity levels are crucial for maintaining the performance and longevity of the fuel cell, especially for Proton Exchange Membrane (PEM) fuel cells. During the reaction process of a fuel cell reactor, the proton exchange membrane needs to maintain a certain level of humidity in order to maintain a high reflection efficiency, therefore the reaction medium needs to carry a certain amount of water vapour into the reactor, this step is usually achieved through a humidifier. Fuel cell humidifiers can help to maintain the humidity and thermal energy in the fuel cell for optimum operation and lifetime. Global key manufacturers of fuel cell humidifier include KOLON, Perma Pure LLC and Freudenberg Filtration Technologies, etc. The top three players hold a share about 84%. South Korea is the largest producer, holds a share around 52%, followed by North America and Europe, with share 23% and 18%, separately. The largest market is South Korea, holds a share about 55%. In terms of power, fuel cell humidifiers with a power range of 50-80KW are the largest subdivision, accounting for approximately 42% of the market share. At the same time, in terms of application, Fuel Cell Cars are the largest downstream field, accounting for approximately 76%.

The global Fuel Cell Humidifier market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 45.60% during the forecast period.
