Abstracts

A fuel cell range extender (FCRE) is an auxiliary power unit that uses a hydrogen fuel cell to generate electricity for charging the battery of an electric vehicle (EV), thereby increasing its driving range beyond what the primary battery alone can provide. Unlike conventional internal combustion engine (ICE) range extenders, FCREs produce zero tailpipe emissions, with water vapor as the only byproduct, and offer quieter operation, higher efficiency, and faster refueling times compared to battery-only recharging. This technology is particularly relevant for applications where extended range, reduced downtime, and emission-free operation are critical, such as in commercial vehicles, long-haul transportation, and certain consumer EV segments where battery weight, cost, or charging infrastructure limitations pose challenges.

The global Fuel Cell Range Extender market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
