Report Overview

A fuel cell car (FCV) is a car powered by electric power generated by an on-board fuel cell device. The fuel used in an on-vehicle fuel cell apparatus is a highly-hydrogen-containing reformed gas obtained by reforming a high-purity hydrogen gas or a hydrogen-containing fuel. Compared with the usual electric vehicles, the difference in power is that the power used by the FCV comes from the vehicle-mounted fuel cell device, and the power used by the electric vehicle comes from the grid-charged battery. Therefore, the key to FCV is fuel cell.
