Abstracts

The full-color Micro-LED display is a micro-display technology that uses tiny LEDs (light-emitting diodes) as pixels. Each LED pixel can emit light independently, thus achieving a display effect with high brightness, high contrast and high color saturation. With the increasing demand of consumers for high-quality display experience and the rapid development of emerging markets such as AR/VR and smart wearable devices, the market demand for Micro-LED micro-displays continues to grow. As Micro-LED technology continues to mature and the market scale expands, more and more companies are beginning to get involved in the Micro-LED industry chain. From chip manufacturing, packaging and testing to display modules and application terminals, the entire industry chain is gradually improving. With the continuous improvement of production technology and the scale effect, the production cost of Micro-LED micro-displays is expected to gradually decrease.

The global Full-Color Micro-LED Display market size was estimated at USD 420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.80% during the forecast period.
