Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Full Dull Nylon 6 Chips competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Full dull Nylon 6 chips are polyamide 6 resin granules that contain a higher concentration of delustrant—typically titanium dioxide (TiO₂)—to significantly reduce surface gloss, resulting in a completely matte or non-reflective fiber appearance. These chips are commonly used in the production of textiles requiring a natural, cotton-like look and feel, such as underwear, outerwear, sportswear, and home textiles. Despite the matte finish, full dull Nylon 6 chips retain the core benefits of nylon 6, including high strength, elasticity, abrasion resistance, and dyeability. They are well-suited for both filament and staple fiber spinning, and may also be used in technical yarns where low sheen and soft touch are preferred.

The global Full Dull Nylon 6 Chips market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
