Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Full-Feed Grain Combine Harvester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of full-feed grain combine harvesters reached 87,160 units, with an average selling price of \$27,250 per unit. The annual production capacity of a single-line full-feed grain combine harvester is approximately 5,000 units, with a gross profit margin of approximately 22.1%. Full-feed grain combine harvesters are agricultural machinery used for efficient grain harvesting. Unlike traditional front-feed (also known as "front-feed" or "front-feed") combine harvesters, full-feed combine harvesters use an internal drive system to deliver harvested grain directly into the working chamber or silo, reducing manual transfer and secondary transport steps and improving operational efficiency. The upstream industry chain for full-feed grain combine harvesters includes power systems and transmission components, as well as harvesting and threshing components. The midstream industry chain comprises full-feed grain combine manufacturers, while the downstream industry primarily serves the wheat, corn, and rice harvesting industries.

The global Full-Feed Grain Combine Harvester market size was estimated at USD 2375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
