Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Full-Motion Flight Simulators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, approximately 315 Full-Motion Flight Simulators were delivered globally, with an average price of approximately USD 4.3 million per unit (ranging from USD 1 to 15 million per unit depending on the level and configuration). The industry's average gross profit margin was approximately 18% to 25% (estimated based on differences in equipment complexity, software licensing, and after-sales contracts). A full-motion flight simulator is a high-fidelity training system that fully replicates aircraft control, avionics, engines, and environment on a six-degree-of-freedom (DOF) moving platform. Typical parameters include: qualification level (Level B/C/D), moving platform (6 DOF), fly-by-wire/force feedback control loading system, accurate cockpit replication (whole aircraft or modular cockpit), vision system (at least 180° field of view, multi-channel projection or dome screen/up to 8K resolution combination), airborne system simulation (FMS, avionics, engine models), stall/fault injection, and detailed data logging and evaluation functions. It requires significant installation space (cockpit + moving platform + machine room + cooling/fire protection) and stringent certification and continuous qualified maintenance (e.g., FAA/EASA/CCAR). Upstream industries include high-precision motors and servo drives, six-axis moving platform manufacturing, image projection and rendering hardware, flight model software and licensing, and audio-visual and control console manufacturing. Downstream industries include airlines, aviation training organizations (ATO), air force/government training centers, and OEM after-sales service. Frasca expanded its production line for FFS in 2021 and increased the number of FFS pads to five, annual production capacity for full-motion flight simulators (including Level C/D and large

aircraft custom kits) is approximately 20-35 units per year. The flight simulator market is driven by multiple factors including expansion of commercial aviation, technological advancement, regulatory compliance, increase in military training, etc. Additionally, the flight simulator market is primarily driven by the continued demand for pilot training and certification. Flight simulators are widely used by airlines and aviation academies to train new and experienced pilots. This demand is driven by a global pilot shortage and the need to maintain high safety standards. The United States has one of the largest flight simulator industries. The presence of major aircraft manufacturers, increasing commercial flights, airlines, and military organizations contribute to the market size and dominance of the region. According to statistics provided by the Federal Aviation Administration (FAA), there are more than 40,000 flights every day in the United States alone, carrying 2.6 million passengers. Since the region has a large commercial aviation industry, pilot training is in high demand. Airlines, flight schools and military agencies rely on advanced flight simulators to train and certify pilots.

The global Full-Motion Flight Simulators market size was estimated at USD 1354.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
