## Abstracts

A full wafer probe card is a test device that integrates a large number of tiny probes that precisely correspond to the pad locations of each chip on the wafer. By contacting the probe card with the wafer to be tested, the electrical parameters of all chips of the whole wafer can be measured at one time, including but not limited to voltage, current, resistance and the like. This method not only speeds up testing, but also reduces wear and error due to multiple contacts.

The global Full Wafer Probe Card market size was estimated at USD 792.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
