### **Report Overview**

Spectrometers are used to measure the frequency emitted by the substance being analyzed. More and more spectral applications require the use of a wide spectral band of 200-1100 nm. Ordinary fiber spectrometers cannot achieve such a wide band due to grating efficiency issues and high-order filter elimination issues. Wide-band fiber spectrometers ensure superior sensitivity and high signal-to-noise ratio while having a wide band, and can provide scientific research-level accuracy results for many spectral applications.
