Report Overview

The fully automatic ELISA Processor is an analytical instrument used in hospitals and laboratories. Its main functions are sample pretreatment, sample analysis and data processing. Enzyme-linked immunosorbent assay, or ELISA for short, is a solid-phase immunoassay method used to detect trace substances in body fluids. The analyte is connected to the enzyme through the specific immune reaction between the antigen and the antibody, and then the enzyme and the substrate produce a color reaction, which is used for quantitative or qualitative detection of antibodies, proteins, cytokines, hormones, etc. in the sample.
