Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fully Automatic Cold Rolling Tube Mill competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of fully automatic cold rolling mills reached 5,200 units, with an average selling price of US\$125,000 per unit. Fully automatic cold rolling mills are equipment used for the secondary precision forming of metal tubes, widely applied in the production of precision seamless tubes made of stainless steel, copper, titanium, and high-temperature alloys. This equipment achieves intelligent operation of the entire process—from billet feeding, rolling, sizing, and surface finishing—through an automatic control system, featuring high precision, high efficiency, and low energy consumption. Upstream raw materials mainly include high-quality alloy steel, rolling bearings, hydraulic system components, and electrical control components. Downstream customers are mainly precision tube manufacturers. The industry's average gross profit margin is approximately 22%~28%, with a global total capacity of approximately 35,000 units per year. In the upstream raw material cost structure, alloy steel accounts for approximately 40%, hydraulic and electrical control components account for 35%, and the remainder is assembly and machining costs; downstream consumption mainly comes from high-end equipment manufacturing and special metal processing fields. In the future, with the development of new energy, semiconductor and hydrogen energy equipment, the automation, digitalization and applicable material range of high-precision cold rolling tube mills will be further expanded, driving the industry into the high-end intelligent manufacturing stage.

The global Fully Automatic Cold Rolling Tube Mill market size was estimated at USD 651.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.70% during the forecast period.
