Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fully Automatic COS Tester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Fully Automatic COS Tester is an integrated characterization system for semiconductor laser chips, primarily designed for post-packaging COS semiconductor laser devices. With a temperature-controlled workstation, the equipment can automatically and precisely measure parameters such as optical power, voltage, current, wavelength, far-field divergence angle, and polarization, while also incorporating chip facet defect inspection. Its testing capabilities include LIV curves, spectrum analysis, far-field distribution, and polarization extinction ratio. The system enables automatic OCR recognition of chip IDs or substrate IDs to achieve data binding, supports both wafer packs and aging fixtures for loading and unloading, and automatically performs bin sorting based on test results. A dual-station parallel testing design doubles UPH (Units Per Hour). While ensuring high-precision testing, the system also performs automated result evaluation and classification of good and defective products, greatly improving testing efficiency and consistency. It is widely used in chip performance testing, reliability assessment, and research and development. In 2024, the global production of fully automatic COS testers was 2,327 units, with an average price of USD 38,500 per unit, an average corporate gross margin of 36.1%, and an annual production capacity of 150 units per production line.

Regional Market Landscape

The global Fully Automatic COS Tester market is centered in Asia, with China accounting for 52%, Japan and South Korea together holding 18%, Europe at 16%, North America at 12%, and other regions representing 2%. This distribution closely aligns with the concentration of the semiconductor industry chain, particularly in optoelectronics and power devices, where the rapid expansion of the Asian market continues to drive demand for testing

equipment. **Key Manufacturers and Industry Competition** The major manufacturers in the industry include FitTech, Wuxi Gedad Optoelectronic Technology, LASER X Technology (Shenzhen), and Shenzhen Raybow Optoelectronics, which compete through differentiation in equipment performance, automation levels, and production stability. The upstream segment involves suppliers of optoelectronic components, precision mechanical modules, and lasers, with high-end laser and precision sensor supply concentrated among a few leading companies. Downstream applications cover chip design and manufacturing enterprises, smart card producers, and research institutions. With the rising demand for automation in production lines, downstream players are increasingly dependent on high-precision and high-stability testing equipment. **Technology Trends and Innovation Directions** The technological evolution of Fully Automatic COS Tester is primarily reflected in multi-function integration and intelligent operation, including comprehensive measurement of LIV curves, spectra, far-field divergence, and polarization within a single platform, as well as OCR-based data binding and traceability. Future developments are expected to emphasize higher automation, parallel testing structures, and AI-driven data analysis to improve efficiency, reduce reliance on labor, and enhance result reliability, while enabling breakthroughs in defect detection and anomaly identification. **Policies and Industry Growth Drivers** Against the backdrop of global semiconductor localization and accelerated substitution, policies continue to support equipment R&D and industrial upgrading, particularly in optoelectronics and power semiconductors, where testing equipment has become a priority focus. Key industry growth drivers include diversified chip application demand, the expansion of 5G communications, the adoption of automotive LiDAR, and the rapid penetration of high-power lasers. These emerging applications require higher precision and greater efficiency in testing, thereby driving continuous expansion of the tester market. **Future Outlook** Looking ahead, the Fully Automatic COS Tester market is expected to experience rapid growth alongside technological iteration, with regional industrial clusters further amplifying their advantages. Leading companies, leveraging technical expertise and production capacity, are likely to achieve higher market concentration. At the same time, with AI empowerment, increased automation, and sustained policy support, the industry will accelerate toward greater intelligence, efficiency, and localization, becoming a key growth engine in the semiconductor testing equipment sector.
