## Abstracts

The fully automatic two-liquid glue filling machine is an automated device used to accurately mix two different liquid glues (usually components A and B) and pour them into a specified position. The equipment automatically adjusts the ratio, flow rate, filling time and speed of the glue through a precise control system to ensure that the two liquid glues are accurately mixed in a predetermined ratio before filling, and maintain stable chemical reactions and performance during the application process. The fully automatic two-liquid glue filling machine is widely used in electronics, automobiles, optoelectronics, medical devices and other industries, especially for scenes that require two-component glues (such as epoxy resin, silicone, polyurethane, etc.) for sealing, bonding, potting, protection and other process operations. The equipment is usually equipped with a high-precision flow meter, stirring system and heating system to ensure the uniformity and quality of the glue under different temperatures and flow conditions. Fully automated operation not only improves production efficiency, but also reduces the error of manual operation, making the two-liquid glue filling operation more efficient, stable and precise.

The global Fully Automatic Double Liquid Glue Filling Machine market size was estimated at USD 688.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
