Report Overview

The fully automatic five classification blood cell analyzer is a medical laboratory device used to analyze blood samples. This is a highly automated machine that can perform a whole blood cell count (CBC) and distinguish between five main types of white blood cells: neutrophils, lymphocytes, monocytes, eosinophils, and basophils. The machine works by collecting a small amount of blood from a patient and passing it through a series of sensors and detectors. These sensors measure the size, shape, and electrical properties of each blood cell, enabling the machine to identify and count the different types of cells present in the sample. The fully automated five classification blood cell analyzer can quickly and accurately analyze a large number of blood samples, making it an important tool for medical laboratories and hospitals. It is used for a wide range of applications, including the diagnosis and monitoring of blood diseases and diseases, such as anemia, leukemia, and lymphoma.
