Report Overview

The fully automatic flexible shaft single crystal furnace is a piece of equipment used to produce high-quality single crystal silicon. It uses a graphite resistance heater to melt the polycrystalline silicon raw material in an inert gas environment, and then uses a flexible shaft pulling method to directly pull out the polycrystalline silicon without dislocation. of single crystal silicon. This single crystal silicon can be used to make solar photovoltaic cells and large-scale integrated circuits. The advantages of the fully automatic flexible axis monocrystalline furnace are that it can improve production efficiency, reduce costs, reduce energy consumption and pollution, and improve the quality and consistency of monocrystalline silicon.
