Report Overview

The fully automatic graphite digestion instrument is a sample pre-treatment equipment specifically designed for analytical laboratories. It is mainly used to dissolve target elements in solid samples (such as metals, ores, soil, etc.) and convert them into solutions suitable for further analysis. The fully automatic graphite digestion instrument usually adopts high-temperature graphite furnace technology, which heats the mixture of the sample and chemical reagents to completely burn or decompose the organic and inorganic substances in the sample, and converts the target element into the ion form in the solution. These ions can be quantitatively detected through subsequent spectroscopic analysis or atomic absorption analysis.
