Fully Automatic Operation (FAO) is a new generation of urban rail transit system that realizes the full automation of train operation through modern computer, communication, control, and system integration technologies. Market Concentration and Key Players: Internationally, the market concentration of fully automatic operation system is relatively high, mainly concentrated in several leading enterprises in railway, such as CASCO, Alstom and Siemens; domestically, it still has a large development space, so the market concentration is not high. At present, Guangzhou Railway Intelligent Control, Beijing Traffic Control Technology and Zhuzhou CRRC are developing. Manufacturing Processes and Market Trends: FAO represents the forefront of urban rail transit technology, which integrates advanced scientific and technological achievements in modern computer, communication, control technology and system integration. In terms of manufacturing process, FAO system design and manufacture focus on the high degree of coordination between hardware and software, as well as system reliability and maintainability. In terms of hardware, high-reliability components need to be adopted and strict screening procedures are adopted to ensure long-term stable operation; software needs to have powerful real-time processing capability and self-diagnosis function to support the automatic operation of the whole process from wake-up to return to depot. In addition, the application of standardization, serialization and modular design principles not only simplifies the production process, but also facilitates subsequent maintenance and upgrading work. In terms of market trends, FAO has attracted attention for its ability to significantly improve transport efficiency and reduce operating costs as global urbanization accelerates and demand for public transport continues to grow. Especially in densely populated metropolitan areas, FAO helps ease traffic pressures and improve service quality. In China, the application of FAO system is also expanding rapidly. The government encourages technological innovation and promotes industrial upgrading, so that more urban rail transit lines adopt

this technology, further promoting the prosperity and development of the market. In the future, with the continuous progress of technology, FAO system will be promoted in more cities and become an important part of building intelligent and efficient urban transportation system.
