Abstracts

The fully automatic paper laser hollowing machine is a new type of processing equipment specially developed for the paper products industry. The fully automatic paper laser hollowing machine uses the high energy density characteristics of lasers to irradiate the surface of paper products with laser beams, so that the paper products are quickly vaporized, melted or burned under the action of lasers, thereby achieving cutting, engraving and hollowing effects. In this process, laser processing is a non-contact processing method, which will not cause any external force deformation to the paper products, ensuring the stability of processing accuracy and product quality.

The global Fully Automatic Paper Laser Hollowing Machine market size was estimated at USD 212.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
