## Abstracts

The Fully Automatic Paraffin Embedding Machine, also known as a Tissue Embedding Machine or Paraffin Embedding Machine, is a medical device used for embedding biological tissue specimens, including human and plant/animal samples, in paraffin after dehydration and paraffin infiltration. This process is conducted to prepare the samples for histological diagnosis or research through sectioning. The principle involves placing the tissue block in molten paraffin, allowing the paraffin to fix the tissue, and then using a microtome to slice the tissue into thin sections for further study. It is suitable for use in medical schools, hospital pathology departments, medical research institutions, biological research units, and food testing departments.

The global Fully Automatic Paraffin Embedding Machine market size was estimated at USD 344.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
