Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fully Automatic Solid-liquid Purge Trap competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The fully automatic solid-liquid purge trap is a highly automated sample pretreatment device designed to extract volatile and semi-volatile organic compounds from solid or liquid samples. It purges the target compounds by passing inert gas into the sample and captures them using a cryogenic cold trap or adsorbent. Subsequently, the captured compounds are rapidly heated and desorbed so that they can be detected by analytical instruments such as gas chromatography (GC) or gas chromatography-mass spectrometry (GC-MS). The fully automatic system can realize the automation of the entire process from sample loading, purging, trapping to desorption, providing higher processing efficiency and reproducibility while reducing human intervention. It is widely used in trace organic matter analysis in environmental monitoring, food safety, and chemical industry.

The global Fully Automatic Solid-liquid Purge Trap market size was estimated at USD 296.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
