Report Overview

The fully automatic specific protein analyzer (immunoturbidimetry) is an instrument used to detect the content of specific proteins in body fluids. Immunoturbidimetry is an analytical method that combines the particle enhancement effect and turbidity measurement technology by utilizing immunological principles. In immunoturbidimetry, specific proteins in the sample combine with specific antibodies to form immune complexes, and then latex particles or other particle-labeled antibodies are added to cause the immune complexes to react and form large particle complexes. These complexes cause an increase in solution turbidity, which is proportional to the concentration of a specific protein in the sample. Complete
