Abstracts

A fully hermetic compressor is a type of sealed refrigeration compressor where the motor and compressor are enclosed within a single welded steel shell, preventing any exchange of gas between the internal components and the external environment; this design eliminates the need for shaft seals, reduces leakage risks, and enhances reliability, making it particularly suitable for applications where maintenance access is limited or undesirable, such as in household refrigerators, air conditioning units, and commercial refrigeration systems.

The global Fully Hermetic Compressor market size was estimated at USD 4682.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
