Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fully Threaded Suture Anchor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. All-suture anchors are orthopedic implants made entirely of high-strength suture material, without traditional metal or rigid polymer anchors. They typically use compressible ultra-high molecular weight polyethylene (UHMWPE) suture bundles as the "anchor," pre-loaded with 1-4 high-strength sutures. After being inserted into the bone hole through a specialized guide, the suture bundle expands within the bone to achieve fixation. They are used for minimally invasive repair of soft tissue-bone interfaces such as the rotator cuff, ankle ligaments, and acetabular labrum. The upstream of the industry chain includes medical-grade UHMWPE fibers, high-performance polyester sutures, precision braiding and heat treatment equipment, and ethylene oxide sterilization service providers. The midstream consists of orthopedic innovation companies with Class III medical device registration certificates, requiring expertise in suture mechanical structure design, bone anchoring performance verification, fatigue testing, and GMP production systems. The downstream primarily targets sports medicine specialties and orthopedic departments in tertiary hospitals, entering clinical use through high-value consumables distributors or national/provincial orthopedic centralized procurement. In 2024, the global production of all-suture anchors was approximately 996,460 units, with an average price of US\$633 per unit. The gross profit margin of major manufacturers is between 48% and 65%, with a single production line capacity of 10,000 units per year.

The global Fully Threaded Suture Anchor market size was estimated at USD 631.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

5.00% during the forecast period.
