## Abstracts

A Fume Scrubber System is a type of air pollution control device designed to remove toxic fumes, gases, and particulate matter from industrial exhaust streams. These systems use a combination of mechanical, chemical, and physical processes to treat and clean air or gas emissions before they are released into the atmosphere. Fume scrubbers are commonly used in industries where harmful vapors, such as volatile organic compounds (VOCs), sulfur compounds, or acidic gases, are generated during manufacturing processes. The scrubbing process typically involves passing contaminated gases through a scrubbing tower or chamber, where a scrubbing liquid (usually water or a chemical solution) absorbs or neutralizes the pollutants.

The global Fume Scrubber Systems market size was estimated at USD 2165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
