Abstracts

Functional polystyrene particles are polystyrene microspheres that have been chemically modified to possess specific surface functional groups, such as carboxyl (-COOH), amino (-NH₂), or sulfonate (-SO₃H), which enable them to interact with various molecules or surfaces in targeted ways. These functionalized particles are widely used in fields like biomedical research, diagnostics, and materials science, where they serve as carriers for biomolecules in assays, drug delivery systems, and biosensors. Their tailored surface properties enhance binding affinity, improve stability, and allow for the conjugation of proteins, DNA, or other functional molecules, making them versatile tools for applications in immunoassays, chromatography, and environmental monitoring.

The global Functional Polystyrene Particles market size was estimated at USD 54.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
