Abstracts

A functional probe card is a sophisticated semiconductor testing interface device that physically and electrically connects automated test equipment (ATE) to integrated circuits (ICs) on a wafer, enabling validation of electrical performance, functionality, and reliability before dicing and packaging. It consists of precision-engineered components such as probes, a printed circuit board (PCB), and interconnects designed to align with and contact microscopic bond pads or bumps on the wafer surface. The card plays a critical role in identifying defective dies early in the manufacturing process, thereby improving yield, reducing costs, and ensuring quality control in semiconductor production, particularly for advanced logic, memory, and application-specific integrated circuits (ASICs).
