## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Functional Wound Dressings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Functional Wound Dressing refers to wound covering materials with specific therapeutic or auxiliary therapeutic effects. They are mainly used to cover sores, wounds or other lesions. By integrating bioactive ingredients, optimizing physical barriers, regulating humidity and other functions, they can replace damaged skin in the process of wound healing and play a temporary barrier role, avoid or control wound infection, provide a moist environment conducive to wound healing, promote wound healing, control infection or manage exudate. For example, antimicrobial dressings inhibit common wound pathogens by integrating antimicrobial agents, hydrocolloid dressings absorb exudate to form colloids to protect wounds, and alginate dressings use ion exchange properties to absorb pus and blood to form hydrogels. They are suitable for various types of wounds such as surgical incisions, traumatic wounds, chronic wounds that are difficult to heal, etc. The development of functional wound dressings varies in different regions around the world. The following is an analysis of its global regional situation: North America and Europe. The market size is large and consumption is concentrated: The main consumer markets for functional wound dressings in the world are North America and Europe. In 2020, North America accounted for 41% of the functional wound dressing market, and Europe accounted for 39%. The two regions have a high level of economic development, a complete medical system, and strong demand for high-quality medical products, which has promoted the development of the functional wound dressing market. Wide product application: In North America and Europe, functional wound dressings are widely used in surgical incisions, acute wounds, and chronic wounds. Among them, the surgical incision field is

the largest downstream application market for high-end wound dressings, accounting for nearly 50%. With the widespread acceptance of moist healing theory in the medical field, advanced wound dressings play an increasingly important role in the treatment of chronic wounds, and the chronic wound field may become the fastest growing market segment.

**Fierce market competition:** The North American and European markets have attracted many internationally renowned companies to participate in the competition, such as 3M, Smith & Nephew, ConvaTec, and M?Inlycke Health Care. These companies have strong strengths in product research and development, technological innovation and marketing, and occupy a large market share.

**Asia-Pacific region** China has a large room for growth. With the continuous expansion of market demand in China, large medical dressing export companies have increased their efforts to develop the domestic market, and foreign manufacturers have gradually implemented localization strategies in the Chinese market.

**Good export performance:** As one of the world's important medical dressing production bases, China has a large competitive advantage in the international market. From January to July 2024, China's medical dressing exports were 155,446 tons, an increase of 11,936 tons over the same period last year, a year-on-year increase of 8.4%; the export value was US\$123,973,700, an increase of US\$84,496,000 over the same period last year, a year-on-year increase of 7.5%.

**Other regions** The market development is relatively lagging: The functional wound dressing market in Latin America, the Middle East and Africa is relatively lagging, and the market size is small. The economic development level in these regions is low, the medical infrastructure is imperfect, and the residents' awareness and demand for functional wound dressings are relatively low.

**Future growth potential:** With the development of the global economy and the improvement of medical standards, the functional wound dressing market in these regions is expected to grow gradually. For example, as the global population ages and the number of patients with chronic diseases increases, the demand for functional wound dressings will also increase accordingly.

The global Functional Wound Dressings market size was estimated at USD 1014.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
