Abstracts

Functionalized polyethylene glycols (PEGs) are essential for PEGylated therapeutic proteins used in drug delivery. In the healthcare industry, it is used for a variety of purposes such as drug delivery, wound healing, and tissue engineering. For drug delivery, as a drug carrier, it can improve the bioavailability and stability of drugs. PEG can enhance the solubility of drugs, improve the ability of drugs to cross cell membranes, and reduce the clearance rate of drugs in the body. These properties of PEG make it an ideal material for drug delivery systems, especially for drugs with poor solubility or low bioavailability. The growing demand for effective and efficient drug delivery systems is driving the growth of the reactive polyethylene glycol (PEG) market. The pharmaceutical industry is constantly looking for new innovative drug delivery systems to increase the effectiveness of drugs while reducing their side effects. PEG-based drug delivery systems are becoming increasingly popular due to their ability to improve drug efficacy and reduce toxicity.

The global Functionalized Polyethylene Glycol (PEGs) market size was estimated at USD 311.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
