Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fused Calcia Stabilized Zirconia competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fused Calcia Stabilized Zirconia is a stable crystalline material made of zirconium oxide (ZrO_2) as the main raw material, with calcium oxide (CaO) added as a stabilizer, and then melted at high temperature in an electric arc furnace and cooled. Its core principle is to inhibit the crystal transformation of zirconium oxide at high temperature through CaO, solve the volume cracking problem caused by the transformation of monoclinic phase and tetragonal phase of pure zirconium oxide, and thus give the material a high melting point, low thermal conductivity, excellent thermal shock resistance and corrosion resistance. In 2024, the global production of fused calcia stabilized zirconia will be approximately 15,000 tons, with an average selling price of approximately US\$7,017 per ton.

The global Fused Calcia Stabilized Zirconia market size was estimated at USD 106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
