Report Overview

Fused Silica is a non-crystalline (glass) form of silicon dioxide (quartz, sand). It lacks long range order in its atomic structure. Its highly cross-linked three-dimensional structure gives it a high using temperature and low thermal expansion coefficient. In optics, fused silica glass has a high transmittance from ultraviolet to near-infrared (185nm-00nm). Coupled with low refractive index variations, it exhibits ideal optical qualities for high-precision optics applications. In addition, the physical properties of fused silica glass make it particularly useful for high-performance applications in harsh conditions. This report mainly focuses fused silica optical components market.

The global Fused Silica Optical Components market size was estimated at USD 236.20 million in 2023 and is projected to reach USD 464.35 million by 2032, exhibiting a CAGR of 7.80% during the forecast period.
