Abstracts

Fusion splice on connectors (FSOCs) are fiber optic connectors that are factory-prepared with a short, bare fiber pigtail and are installed onto a prepared fiber optic cable by fusion splicing rather than mechanical or adhesive methods, offering lower insertion loss, higher return loss, and greater long-term reliability. The market for FSOCs is primarily driven by the ongoing global expansion of fiber-to-the-home (FTTH) networks, data center interconnects, and 5G infrastructure deployments, where rapid and high-performance field terminations are critical. Key players include established optical component manufacturers such as Sumitomo Electric, Fujikura, Corning, and AFL, with competition centered on splice speed, ease of use, and compatibility with existing fusion splicers. While the upfront cost per connector is higher than traditional field-terminated options, the total cost of ownership is often lower due to reduced labor, testing time, and superior performance, particularly in high-density and high-bandwidth environments. Demand is also influenced by trends toward pre-terminated solutions and modular connectivity in data centers, as well as the need for skilled technicians capable of operating fusion splicing equipment efficiently. Regional growth is strongest in Asia-Pacific, followed by North America and Europe, reflecting varying paces of broadband rollout and telecommunications investment.

The global Fusion Splice On Connectors market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.45% during the forecast period.
