Abstracts

FZ silicon ingot is a kind of high purity monocrystalline silicon material prepared by FZ method. In this method, a part of a silicon rod is melted by local heating without contact with a container, and the molten silicon liquid is supported by surface tension to be suspended in air. Then, by moving the heater along the silicon rod, the melted part is gradually pushed forward and recrystallized, thereby forming a single crystal silicon rod with higher purity.

The global FZ Silicon Ingot market size was estimated at USD 85.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
