Abstracts

Granulocyte colony-stimulating factors (G-CSFs) are therapeutic proteins used to stimulate the production of white blood cells, primarily neutrophils, in patients undergoing chemotherapy, radiation, or bone marrow transplantation, thereby reducing the risk of neutropenia and associated infections. The G-CSF market comprises both originator biologics, such as filgrastim and pegfilgrastim, and their biosimilar versions, which are highly similar but not identical copies of the reference products. This market is driven by the rising global incidence of cancer, increased adoption of chemotherapy regimens, and growing demand for cost-effective treatments, particularly in healthcare systems under budget constraints. Biosimilars have gained significant market share due to their lower cost, comparable efficacy, and favorable regulatory pathways, though market dynamics vary by region depending on patent expirations, reimbursement policies, and physician acceptance. Competition is intensifying as more biosimilars enter the market, putting downward pressure on prices and expanding patient access, especially in emerging economies. Key players include originator companies like Amgen and biosimilar manufacturers such as Sandoz, Pfizer, and Biocon, with ongoing innovation focusing on next-generation long-acting formulations and enhanced delivery systems.

The global G Csf And G Csf Biosimilars market size was estimated at USD 5800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
