The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on G-protein Coupled Receptors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. G-protein coupled receptors (GPCRs) are a type of protein receptor located on the cell membrane that can sense external signals (such as hormones, neurotransmitters, odor molecules, etc.) and activate G proteins in cells to trigger a series of signal transduction reactions and regulate the physiological activities of cells. GPCRs have seven transmembrane structures and are the largest family of receptors in the human body. They are widely involved in important life processes such as nerve conduction, immune regulation, and metabolic control, and are also important targets for many drugs.
