Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Galacto-oligosaccharides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Galacto-oligosaccharide (GOS) is a type of functional oligosaccharide composed mainly of galactose units with a terminal glucose residue. Naturally found in human and bovine milk, GOS serves as a prebiotic that promotes the growth of beneficial gut bacteria such as Bifidobacteria and Lactobacilli, thereby supporting digestive health and enhancing immune function. It is widely used in infant formula, dietary supplements, and functional foods. Galacto-oligosaccharides (GOS) are recognized as functional prebiotics with established benefits in gut health improvement, immunity enhancement, and mineral absorption. As a non-digestible carbohydrate, GOS promotes the proliferation of beneficial bacteria such as bifidobacteria and lactobacilli, making it a widely adopted ingredient in infant formula, dairy products, functional beverages, and nutritional bars. GOS products are mainly offered in two forms: Liquid and Powder. The liquid form (typically 55-70% concentration) is favored in liquid dairy, beverages, and syrups due to ease of incorporation but poses challenges in storage and transportation. The powder form, suitable for infant formula, solid beverages, nutrition bars, and baked goods, offers superior storage stability and blending flexibility, though it requires careful moisture control and may dissolve slower in certain processes. The rising trend of dietary supplements and portable functional foods has significantly boosted demand for powder GOS in recent years. In terms of application, the Food & Beverage segment remains dominant, with widespread use in infant formula (1.5%-10%), yogurts, fermented milk, and plant-based or sports beverages. The Dietary Supplements sector is experiencing rapid growth, driven by adult prebiotic and gut-health awareness, with expanding applications in probiotic

capsules, powders, and liquid supplements. Meanwhile, the Others category, such as pet food, animal feed, and skin care products, is emerging, especially in Asia's booming pet nutrition market. Regionally, the Asia-Pacific market (China, Japan, Korea) leads in growth due to increasing health awareness and infant formula upgrades, while Europe maintains maturity through stringent regulations and product penetration. North America shows potential in functional foods and adult supplements. Intense competition exists between local Chinese players and global leaders such as FrieslandCampina, Yakult, DuPont, and Nissin. Future trends point towards high-purity, chain-length-specific GOS, elderly and sports nutrition applications, and cost reductions via synthetic biology technologies.

The global Galacto-oligosaccharides market size was estimated at USD 874.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
