Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gallium Oxide Wafer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Gallium Oxide Wafer is a semiconductor single crystal made of α -gallium oxide (α -Ga₂O₃) material. α -Gallium oxide is a direct bandgap wide bandgap oxide semiconductor with a bandgap width of about 4.9 eV and excellent electrical properties, such as high breakdown electric field strength (8 MV/cm) and high ultraviolet transmittance. This makes α -gallium oxide single crystals have important applications in high power, high voltage resistance, ultraviolet detectors and other fields. Compared with traditional materials such as Si, SiC and GaN, α -gallium oxide exhibits lower losses when manufacturing ultra-high power components and has stronger voltage resistance. It is one of the key materials for future high-end devices such as high power, high frequency, and high temperature. Gallium Oxide Wafer can be divided into several categories: 2 Inches, 4 Inches, 6 Inches, Square and Other. 4 Inches segment account for 55% of the global market share. Gallium Oxide Wafer has wide range of applications, such as education and research, automotive and others. Education and Research sector was the most widely used area which took up about 53% of the global market size. China and Japan are the two largest countries of Gallium Oxide Wafer in the world in the past few years and it will keep increasing in the next few years. These two countries took up about 89.5% of the global market. Novel Crystal Technology, Garen Semi, Hangzhou Fujia, Beijing MIG, CETC etc. are the key producers in the global Gallium Oxide Wafer market. In recent years, there are more and more Gallium Oxide Wafer manufacturers, and the technical reserves have also developed rapidly. In addition to universities and research, corporate users have also begun to use this product, and the whole market is developing rapidly. If there are greater technological

breakthroughs in the future, or if there are very good products in downstream epitaxy and device products, the Gallium Oxide Wafer industry will experience explosive growth.

The global Gallium Oxide Wafer market size was estimated at USD 53.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 30.00% during the forecast period.
