Abstracts

Galvanized steel plates are a type of steel sheet coated with a protective layer of zinc through the hot-dip galvanizing process, which involves immersing the steel in molten zinc to form a metallurgically bonded coating that significantly enhances corrosion resistance, durability, and longevity. This coating acts as a sacrificial anode, protecting the underlying steel from rust and environmental degradation even when scratched or exposed to moisture, making these plates particularly suitable for harsh or outdoor applications where untreated steel would rapidly deteriorate. The thickness of both the base steel and the zinc coating can be customized to meet specific performance requirements, balancing strength, formability, and corrosion protection for diverse industrial and construction uses.

The global Galvanized Steel Plates market size was estimated at USD 523.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.35% during the forecast period.
