## Abstracts

Game animation service refers to the professional service of providing animation content and technology for game works. It is not only the process of converting static images into dynamic images, but also the use of animation technology to show the personality, emotions, actions and skills of game characters, creating a more immersive gaming experience for players. This service covers multiple links from character design, motion capture, animation production to special effects rendering, and is an indispensable part of the game development process. The rapid growth of the game animation services market is primarily driven by players' increasing demand for immersive experiences and high-quality visuals, the increasing cost and complexity of game content production, and the robust demand for professional animation talent in independent games.
