Report Overview

Gaming Mouse & Keyboards are engineered to provide gamers with higher-end performance and a great gaming experience.

Gaming keyboards often have a variety of programmable keys for use in or out of game. They are often backlit, and may feature a thicker coating of paint on the most used gaming keys (w, a, s, d, space). They're also more suitable for long time use by (usually) being built in a more robust fashion, and are made so that they won't hurt the user's hands after a period of long use. Gaming keyboards can also come with a variety of useful features from a windows key disable switch to a LCD screen.

Gaming Mouse is specifically designed for use in computer games. They typically employ a wide array of controls and buttons and have designs that differ radically from traditional mice. It is also common for gaming mice, especially those designed for use in real-time strategy games such as StarCraft, or in multiplayer online battle arena games such as Dota 2 to have a relatively high sensitivity, measured in dots per inch (DPI). Some advanced mice from gaming manufacturers also allow users to customize the weight of the mouse by adding or subtracting weights to allow for easier control. Ergonomic quality is also an important factor in gaming mice, as extended gameplay times may render further use of the mouse to be uncomfortable. Some mice have been designed to have adjustable features such as removable and/or elongated palm rests, horizontally adjustable thumb rests and pinky rests.

The global Gaming Mouse & Keyboards industry mainly concentrates in the North America, Europe, China and Taiwan. the global leading players in this market are Razer, Corsair, A4TECH, Logitech and RAPOO, which accounts for about 58% of total production value.
