Abstracts

GaN Half-Bridge Driver is an electronic component or integrated circuit (IC) that utilizes gallium nitride (GaN) technology to drive a half-bridge circuit configuration. In a half-bridge configuration, two switches (usually transistors) are arranged in a series configuration between a power supply and ground, with the load connected between the two switches' common connection point and another reference point. The GaN material in these drivers offers superior performance characteristics such as high switching speeds, low power losses, and high efficiency, making them ideal for applications requiring fast and efficient power conversion. GaN half-bridge drivers are commonly used in motor control, power inverters, and other power management systems where high performance and reliability are critical.

The global GaN Half-Bridge Driver market size was estimated at USD 894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
