Report Overview

GaN has superior properties than silicon such as high breakdown voltage and saturation velocity. The bandgap in GaN is almost thrice the bandgap of silicon. Thus, GaN has the ability to improve power conversion efficiencies, raise power density levels, extend battery lives, and accelerate switching speeds in different end-user segments such as consumer electronics products, telecommunications hardware, electric vehicles, or domestic appliances.

In terms of geographical regions, North America will be the major revenue contributor to the market throughout the next five years. The increasing applications of GaN RF devices in the defense sector, the large-scale expansion of 4G networks, and the introduction of 5G, will fuel the growth of the market. Moreover, the presence of a number of GaN RF device vendors in North America and the demand for better powered chips in the consumer, defense, and connected devices sectors, will also drive the market's growth prospects in this region.
