Abstracts

Gantry Boring Milling Machining Center adopts the viaduct structure, so that the 3 main moving parts of the heavy machine tool are in the lightest quality, the least driving force and dynamic servo response faster favorable conditions. Bearing the movement of the bed and large workpiece of the floor table as a whole, not only the overall structure is compact, high utilization of space, but also conducive to the rigidity of the machine tool, improve the accuracy and installation, transportation convenience. The guide support of the large span beam adopts the design of double-sided single high-strength guide rail with multiple sliding blocks to avoid the over-positioning of the large stroke motion guide parts and the high precision machining requirements of the foundation large parts. The transmission technology of pinion and rack anti-backlash gear box for large stroke drive makes the minimization of theoretical stroke be realized in the movement of mechanical structure. Using the double drive and double feedback "gantry shaft" function of the CNC system, the synchronization problem of the long span bridge gantry double drive satisfying the high precision positioning and servo response is solved. The global gantry boring milling machining center market is showing a steady growth trend, which is mainly driven by the upgrading of high-end manufacturing industry: the demand for efficient processing of large titanium alloy structural parts (such as aircraft wing beams) in the aerospace field has surged, and the new energy vehicle industry has promoted the precision of integrated die-casting molds to $\pm 0.02\text{mm}$, while emerging fields such as the wind power industry (such as 20MW offshore wind turbine blade molds) and energy storage equipment (liquid cooling plate processing) have contributed more than 30% of the market growth. In terms of regional distribution, the Asia-Pacific market accounts for more than 50%. Driven by the "Smart Manufacturing 2025" policy, local brands such as Genesis and Haitian Precision are accelerating the replacement of imported equipment; the European and American markets focus on five-axis linkage and intelligent high-end models. The competitive landscape is differentiated. Japanese and German companies

(such as Mazak and Okuma) still dominate the five-axis precision market, while Chinese manufacturers seize the mid-range market through cost-effective strategies. The future trend will evolve towards composite processing (integrated 3D printing/laser cladding) and green manufacturing (hydrostatic guide technology that reduces energy consumption by 15%), but the dependence on imports of core components (such as CNC systems) is still over 60%, becoming a key bottleneck restricting industry upgrading.

The global Gantry Boring Milling Machining Center market size was estimated at USD 1602.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
