Abstracts

Gantry robot palletisers are automated material handling systems that utilise an overhead gantry structure to transport, stack, and organise goods—typically boxes, bags, or containers—onto pallets in predefined patterns. These systems are characterised by their three-axis (X, Y, Z) movement, high payload capacity, and flexibility in handling diverse product shapes and sizes, often integrating advanced features such as vision systems, gripper tool changers, and software for real-time tracking and optimisation. They are widely deployed across industries including food and beverage, pharmaceuticals, logistics, and manufacturing, where efficiency, hygiene, space utilisation, and reduction in manual labour are critical operational priorities.

The global Gantry Robot Palletiser market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
