### Report Overview:

The most common use of pesticides is as plant protection products (also known as crop protection products), which in general protect plants from damaging influences such as weeds, fungi, or insects. This use of pesticides is so common that the term pesticide is often treated as synonymous with plant protection product, although it is in fact a broader term, as pesticides are also used for non-agricultural purposes.

Garden Pesticides are substances meant for attracting, seducing, and then destroying any pest in the garden, which in general protect plants from damaging influences such as weeds, fungi, or insects.
