Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Garment On Hanger System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Garment-On-Hanger (GOH) System is a specialized logistics and transportation method used primarily in the fashion and apparel industry to transport garments while keeping them hung on hangers, rather than folded in boxes. This system preserves the shape, quality, and appearance of the clothing, reducing the need for ironing or steaming upon arrival. GOH systems are commonly used in supply chains involving high-end or wrinkle-sensitive garments, such as suits, dresses, and coats. They are integrated into trucks, containers, and warehouses with rails or racking systems, enabling efficient handling, sorting, and direct-to-store delivery, thereby streamlining operations and reducing labor costs. The product is priced at approximately \$60,000-\$120,000 depending on its complexity, and its gross profit margin is approximately 45%. The Garment On Hanger (GOH) system involves an integrated supply chain designed to transport and handle apparel while hanging to minimize creasing and reduce post-delivery processing. Its upstream segment includes manufacturers of hangers, garment racks, conveyor systems, rails, packaging materials, and automation equipment, along with suppliers of electronic components and sensors used in sorting and tracking. The midstream stage covers logistics providers and distribution centers that install GOH systems to move garments efficiently from production facilities to retail destinations. The downstream industry consists of apparel brands, retailers, and e-commerce warehouses that receive, display, or ship ready-to-sell garments directly on hangers, improving operational efficiency and presentation quality. Together, this chain connects textile production, automated logistics, and retail display in a streamlined garment handling ecosystem. From a market perspective, the

Garment On Hanger (GOH) system is gaining traction as global apparel supply chains prioritize efficiency, automation, and garment quality preservation. Increasing demand from fashion retailers, e-commerce fulfillment centers, and third-party logistics providers is driving adoption, as GOH systems significantly reduce manual handling, packing time, and post-transport ironing costs. The system aligns with trends toward automated warehousing, omnichannel retailing, and sustainable logistics, offering a cost-effective way to minimize waste and energy use compared to traditional flat-packed garment handling. Furthermore, the rise of fast fashion and just-in-time inventory models has reinforced the need for seamless, ready-to-display garment distribution, positioning GOH solutions as a key enabler of lean and responsive apparel logistics in both developed and emerging markets.

The global Garment On Hanger System market size was estimated at USD 258.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
