### Report Overview

Chromatographic Instruments is used to separate chemical substances to determine their content or to prepare them for further testing. Chromatography instruments are applied in oil refineries and on space vehicles to analyze atmospheres on other planets. LC-MS (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. LC-MS is used in many different fields and is applied to pure samples as well as complex mixtures.

A mass spectrum is a plot of the ion signal as a function of the mass-to-charge ratio. These spectra are used to determine the elemental or isotopic signature of a sample, the masses of particles and of molecules, and to elucidate the chemical structures of molecules, such as peptides and other chemical compounds.
